Syllabus for Physics 210, fall 2010

Ben Crowell, Fullerton College

corequisite The corequisite is Math 150A (first-semester calculus).

office hours My office hours are in the classroom (not my office), M 9:30-10:30, Tu 4:30-5:30, W 12-1, Th 12-1, Th 4:30-5:30.I urge you to pick at least one of these office hours to come to every week as part of your habitual schedule; if none of my office hours fits your weekly schedule, please give me a copy of your schedule written out on a grid, and we'll see what we can work out.

web page `www.lightandmatter.com/area3phys205.html`
To e-mail me, use your Spotter account.

required materials The texts are *Newtonian Physics*, *Conservation Laws*, *Vibrations and Waves*, and the lab manual. You'll also need a calculator, two bound lab notebooks (either $10 \times 7\frac{3}{4}$-inch or $9\frac{3}{4} \times 7\frac{1}{2}$-inch) with graph paper pages (near the calculators at the bookstore) a metric ruler, a protractor, and your own e-mail. If you need to review trig, I recommend the free book at `http://mecmath.net/trig/`. If you've already taken calculus, and don't have a text to refer to, you might find my free online calculus book helpful: `lightandmatter.com/calc`. If English isn't your first language, you can use a dictionary on exams, but it has to be a printed dictionary, not an electronic one.

getting started Here's a quick summary of the things you need to do by the second class meeting:

1. Get everything listed under "required materials" above. You can buy the books and the lab manual at the FC bookstore, or download them from my web page and print them out.
2. Read this syllabus.
3. Consult the schedule on page 4. Do the listed reading and the homework problems. Take notes on the reading, and print two copies of them.
4. If you don't already have e-mail, get an account.

grading Grades will be determined as follows:

homework	121 problems @ 1 point each	121
reading quizzes	38 questions @ 1 point each	38
reading notes	19 @ 1 points each	19
prelabs	14 @ 2 point each	28
check-off labs	9 @ 6 points each	54
lab writeups	5 @ 12 points each	60
short exam	1 @ 120 points each	120
long exams	3 @ 180 points each	540

points	grade
80%	A
70%	B
60%	C
50%	D

reading notes I'll maintain a folder for you containing your notes on the reading. These are the notes you get to use on the exams. You should do the notes on a computer (for ease of revision), and do them after you read, not while reading (so that you know what ended up being the main points).

On any date when reading is assigned, you should be prepared for an open-notes quiz, and print out an extra copy of your notes on the reading; you'll turn in the copy, and I'll add it to your folder. It has to be a copy, because you need the original for your own use in studying and problem solving. I expect you to bring your own copy of your notes to school so that, e.g., we can refer to them together if you're getting help in my office hours. I will not accept hand-written notes.

Your notes need to be entirely in your own words; stating everything in your own words is a good way to test and consolidate your own understanding. Cutting and pasting from the book would be a form of cheating on exams (because the

exams are not open-book), and would also be plagiarism if the copied material wasn't properly attributed.

Shorter is better. The laws of physics are fundamentally simple. I would suggest limiting yourself to no more than half a page per chapter. By the end of the semester, the simple underlying structure of the material will have become more and more obvious to you, and I think you should be able to go back over your notes and edit them down to no more than about a page *total*. It's not against the rules for your notes to be too long, but it's not smart, either; long notes usually indicate that you're not distinguishing fundamental principles from trivia, or that you're making futile efforts to write a cookbook of problem-solving techniques, which is a self-defeating way to approach problem solving. If it feels too scary to walk into an exam with short notes, I suggest making a separate long version as a security blanket, but sealing them shut with a big binder clip to remind yourself that using them is probably a mistake, indicating that you aren't working from basic principles.

OpenOffice for note-taking

For note-taking, I recommend that you use the free OpenOffice word-processor, which makes it easy to do equations. You can download it from openoffice.org. If you don't have a computer at home, you can use the ones in room 416 or 2000, which have OpenOffice installed. When you're writing equations, in most cases all you need in order to make them readable is a few superscripts. For example, suppose you want to write the equation $v^2 = 2ax$ in your notes. Just type `v2=2ax`, then select the 2 with the mouse and do Format>Character>Position>Superscript.

If you want to get fancier, you can use OpenOffice's built-in equation editor. Do Insert>Object>Formula, and an empty gray box for the equation is inserted in your document. An equation editor window pops up at the bottom of the screen, and a toolbox of mathematical symbols at the top. Although the toolbox is supposed to make it easier to find and enter the symbols you want, I found it to be more confusing; the most straightforward way to do it, in my opinion, is to type directly into the equation editor. You have to learn the codes for the things you want to type, but there are only three codes you'll typically ever need: `^` for superscripts, `_` for subscripts, and `over` for fractions. Enter a Greek letter as, e.g., `%theta` , making sure to put a space after it. As an example, to make

$$\Delta x = \frac{1}{2}at^2 + v_o t \qquad ,$$

you would do `%DELTA x = 1 over 2 at^2 + v_o t`. Note that the spaces after DELTA, both 2's, and o are mandatory. It understands parentheses, so, e.g., `1 over (2+3)` gives $\frac{1}{(2+3)}$. For invisible parentheses use curly brackets, e.g., `1 over {2+3}` produces $\frac{1}{2+3}$.

Spotter

Spotter is computer software I've written to help you check your answers to homework problems. It can check both numerical answers and symbolic ones. Having Spotter helps you more than having answers in the back of the book, because it is programmed to give you helpful pointers. If you put in an wrong answer that I've anticipated, it will explain why it's wrong. If your answer doesn't make sense in terms of units, it will tell you that. If you get a wrong answer, you can redo the problem and put in the right answer later for full credit.

Problems that are underlined on page 5 of the syllabus have purely mathematical answers, and are in Spotter. To get credit for an online homework problem, you need to enter a correct answer in Spotter, and also turn in your written calculations and explanations along with the rest of the homework. What I'm really trying to do here is get you to come to my office hours and get help if you can't get the right answer — Spotter helps you by letting you know whether you have the problem right *before* you turn it in.

You don't need to install the software; you just use it through a web browser. Start from the class's web page, then click on the "homework" link to the class's Spotter page. Once you're in Spotter, make sure to log in, or else you won't get credit for your work! Once you're logged in, all your answers will be recorded.

When using Spotter, you have to be careful about the notation you use for inputting mathematical expressions. Spotter is designed to allow you to use

something resembling normal human mathematical notation, as opposed to the notation used in computer programs. However, human math notation is designed for humans, not computers, and you need to learn a few things about how to type your expressions in a form that Spotter will interpret correctly.

First, everything you type will be smashed down to one line of text, eliminating the superscripts and subscripts. For example, a variable name with a subscript, like x_1, is entered as `x1`. Since there are no superscripts, you have to enter exponents using the `^` symbol (shift-6), e.g., x^2 becomes `x^2`. You can enter a square root as either `sqrt(x)` or `x^.5`. There is no way to enter the times symbol, $\times$, without confusing the computer and making it think you meant the variable x, so in scientific notation you should simply leave a space where you would normally put the times symbol, e.g., 5×10^6 becomes `5 10^6`. Don't try to enter this as `5e+6`; that's what a lot of computer software would want, but Spotter is trying to interpret everything as normal human notation, so it will think you meant $5e + 6$, where e is a variable.

Another thing to keep in mind is that human languages, including human math notation, are ambiguous. Use parentheses liberally to make your meaning clear. There are two main situations where you need to watch out. First, arguments to functions: `sin 2x` will be interpreted as $(\sin 2)(x)$; if you intended $\sin(2x)$, you should have entered `sin(2x)`. Second, the bottom of fractions: `1/3c` will be interpreted as $(1/3)c$, so if you want $\frac{1}{3c}$, you need to enter `1/(3c)`.

An advantage of using Spotter in the free Firefox web browser (firefox.com) is that, unlike Internet Explorer, Firefox can display mathematical equations. As you type in the equation, it will show you, "on the fly," its interpretation of what you're typing. This makes it much easier to avoid confusion about how to enter your answers.

academic honesty policy

In cases of serious academic dishonesty, I will assign a zero on the work, and I will also pursue action at the college level, which may result in penalties such as suspension or expulsion. Serious academic dishonesty includes cheating on an exam, or turning in homework that is plagiarized from my solutions.

I will also assign a zero in cases where two students turn in homework or lab reports that contain identical or nearly identical work. A good rule of thumb is that if A is helping B, only B's paper should be out, and the pen should be in B's hand.

labs

At the end of the first lab in the lab manual, there is information about the organization of labs. Note that most labs have prelab questions, which you're expected to turn in on a piece of paper (not in a lab notebook) at the beginning of lab.

If you miss a lab, you can only make it up in one of my other lab classes over the rest of the week, and it is still due at the same time it's due for everyone else. If you want to make up a lab, you should leave a note for Hanh Pham, the physics technician, in the physics stockroom in room 417T.

drops

I will drop you under any of the following conditions:

- You miss any lab or lecture during the first two weeks without contacting me in advance by e-mail. If I don't receive any written work from you, I will consider that the same as an absence on that day.
- You miss an exam without contacting me in advance by e-mail.
- Over a period of seven consecutive days, you don't turn in any homework or quizzes, and don't complete all the lab work (participating in lab, and turning in written lab work when it's due).

Schedule for Physics 210, fall 2010

		read ch.	hw	topics	lab
Aug.16	M				1 interactions
	W	0,1*	1	Scaling. Order-of-magnitude estimates.	
23	M	2	2	Velocity and relative motion.	2 kinematics
	W	3	3	Acceleration and free fall.	
30	M		4		4 the Earth's gravitational field
	W		5		
Sep. 6	M			*Labor Day*	*Labor Day*
	W	4	6	Force and motion.	
13	M	5	7	Analysis of forces.	5 Newton's second law
	W	6	8	Newton's laws in three dimensions.	
20	M	7.1-3	9	Vectors.	8 vector addition of forces
	W			*exam 1*†	
27	M	8	10	Vectors and motion.	9 accel. in 2 dimensions
	W		11		
Oct. 4	M	9		Circular motion.	*exam 2*†
	W		12	Physics 210 meeting.	
11	M	10	13	Gravity.	10 conservation laws
	W	1**	14	Conservation of energy.	
18	M	2	15	Problem solving. Hw due at 3:00.	
	W	3	16	Work.	
25	M		17	problem solving	11 cons. of energy
	W		18	Physics 210 meeting.	
Nov. 1	M	4	19	Conservation of momentum.	12 cons. of momentum
	W		20	problem solving	
8	M	5		Conservation of angular momentum	*exam 3*†
	W		21		
15	M	1***	22	Vibrations.	13 torque
	W	2	23	Resonance.	
22	M	3	24	Free waves.	17 resonance
	W		25		
29	M	4	26	Bounded waves.	19 standing waves
	W		27	problem solving	
Dec. 6	M		28		20 resonances of sound
13	M			*exam 4, 9-11*†	

†All exams are cumulative. Each exam will concentrate on the material that you haven't yet been tested on. The last date to add notes to your folder for use on an exam is the preceding lecture.
Exam 1 covers all the reading through ch. 5 of *Newtonian Physics*. Exam 2 is through ch. 7 of *Newtonian Physics*. Exam 3 is through ch. 2 of *Conservation Laws*. Exam 4 covers everything.
* Begin reading from *Newtonian Physics*. Whenever reading is assigned, you should bring a copy of your notes to class.
** Begin reading from *Conservation Laws*.
*** Begin reading from *Vibrations and Waves*.

Homework

Problems in *italics* and marked with an integral sign, $\int$, use calculus.
Underlined problems are in Spotter (see page 2). The full statement of each problem is in the book, not in Spotter. "Challenge" problems are extra credit; if you do a challenge problem, please write me an eye-catching note on your homework paper so I'll know to grade it.
Note that in many of the homework problems, you need to look up data in the back of the book.
Sometimes different problems are assigned randomly to different students. Each student has his or her own page of homework problems in this syllabus. If you don't have a copy of your own page, you can download the syllabus from `lightandmatter.com/area3phys205.html`. If you download the latest syllabus and it doesn't have a page for you, please email me via your Spotter account and remind me to update it.

Homework Assignments for Joe Blow

If a problem doesn't exist in your printed copy of the book, you can get it online at `lightandmatter.com`. These assignments are all from *Newtonian Physics*:

hw 1: Ch. 0, #11 4

hw 2: Ch. 1, #5,10,16,20 1

hw 3: Ch. 1, #22 24 Ch. 2, #4 1,2 Ch. 3, #7,15

hw 4: Ch. 1, #challenge: 15 Ch. 2, #9 3 Ch. 3, #3,16,20 27,30
Problem 27 is the algebra that's needed in order to analyze this week's lab. If you have trouble with it, please come and get help in my office hours.

hw 5: Ch. 3, #11,18,19,28 1

hw 6: Ch. 3, #12 Ch. 4, #7

hw 7: Ch. 4, #2,10 9 Ch. 5, #4,20 10
Ch. 5, #10 is the algebra that's needed in order to analyze this week's lab. If you have trouble with it, please come and get help in my office hours.

hw 8: Ch. 5, #2,8 19,23 Ch. 6, #3

hw 9: Ch. 6, #2 7 Ch. 7, #1

hw 10: Ch. 6, #4 Ch. 7, #2,3 Ch. 8, #12ab
Problem 12 is the algebra that's needed in order to analyze this week's lab. If you have trouble with it, please come and get help in my office hours.

hw 11: Ch. 2, #∫6 Ch. 8, #2 1,3

hw 12: Ch. 8, #8 4 Ch. 9, #2

hw 13: Ch. 8, #11 5 Ch. 9, #6 3,8 Ch. 10, #10

hw 14: Ch. 9, #1 9 Ch. 10, #1,4

hw 15: Ch. 9, #12 Ch. 10, #6 20,22,23 CL 1, #3,7,9

These problems are from *Conservation Laws*, except when marked "NP:"

hw 16: Ch. 1, #12 4,14 Ch. 2, #2 NP 6, #∫6 NP 10, #9
Calculus-based problem NP 6, #6 involves local extrema.

hw 17: Ch. 1, #5 Ch. 2, #1,3,5,13 Ch. 3, #1,2

hw 18: NP 3, #∫17

hw 19: Ch. 2, #10a 10b Ch. 3, #8 NP 10, #7

hw 20: Ch. 2, #10c 6 Ch. 3, #4 21 Ch. 4, #14 1
For ch. 2, #6, you may want to reuse the result of NP 9, #3.

hw 21: Ch. 2, #challenge: 7 Ch. 3, #19 Ch. 4, #3-5 Ch. 5, #1 NP 3, #∫13
The calculus-based problems involve second derivatives.

hw 22: Ch. 3, #∫10 Ch. 5, #21,24 7,23 ∫18 NP 8, #∫7 VW 1, #1,2
Calculus-based problem CL 3, #10 involves the chain rule.

From *Vibrations and Waves*, except when marked "NP" or "CL:"

hw 23: Ch. 1, #3 4 Ch. 2, #∫3 NP 9, #∫4 CL 3, #∫15
Calculus-based problem CL 3, #15 assumes you know the fundamental theorem of calculus, and have read sections 3.4 and 3.5 of Conservation Laws.

hw 24: Ch. 2, #4 NP 4, #∫6 CL 3, #∫9

hw 25: Ch. 3, #1 6

hw 26: Ch. 3, #2,3,5,8 4,7

hw 27: Ch. 4, #3,4,7 2
An older version of ch. 4, #3 referred to a clarinet, and had a mistake in it. Here is the new version: A concert flute produces its lowest note, at about 262 Hz, when half of a wavelength fits inside its tube. Compute the length of the flute. Answer: 65 cm.

hw 28: Ch. 4, #1,5,6
